Service Benefits

makes your documents work for you and lets you get back to running your business.

Clean metadata all the time every time.

Document management software has OCR technology, but the accuracy of what is extracted varies greatly. If the document has poor contrast, is creased or dirty, or the text and the background are similar in darkness, then OCR may not work well or at all. With Virtual Data Partners you never have to worry about OCR capturing your critical data accurately.

Your software applications just became more powerful.

Many companies purchase software to manage their documents. But these companies soon learn that until the document is processed accurately it cannot be managed by software. Instead of relying upon your software's OCR to capture data intermittently, Virtual Data Partners can capture the key data fields and then integrate it directly into your software.

Frees up your employees to focus on their jobs.

The data fields not captured by OCR must be manually entered by your employees. This is a time consuming and laborious process which is exacerbated by employee workload, lack of training and turnover. Virtual Data Partners frees up your employees to focus on more beneficial activities that are core to your business.

Data security is paramount for you and us as well.

When required, Virtual Data Partners uses the Microsoft Azure cloud computing platform. Microsoft provides Azure customers with detailed information about their security and compliance programs, including audit reports and compliance packages, to help customers assess their services against their own legal and regulatory requirements. Among Azure's many certifications and compliances are HIPAA, FERPA, FISMA, ISO 27001/27002 and SOC 1/SSAE 16/ISAE 3402 and SOC 2.

It's time to put your documents in their place.
